

Reamplification) could open up the path to an additional stage in all-optical ultrafast signal processing and could become an important building block of future exciting applications in photonics.

### **Acknowledgements**

All the experiments were performed on the PICASSO platform in ICB. We kindly acknowledge Erwan Pincemin (Orange Labs) for fruitful discussion. We also thank C.H. Hage and V. Tissot for the development of the automatic monitoring of the regenerator transfer function. We finally acknowledge the financial support from the French Agence Nationale de la Recherche project FUTUR (project 2006 TCOM 016), the CNRS, Synerjinov and the Conseil Régional de Bourgogne, Photcom PARI program.
